

Making our world more productive

**EXOARD™**

Advanced High-Velocity Coating Solutions

# EXOGARD™ coatings are dense, thin, and smooth. These coatings are also REACH-compliant environmentally-friendly alternatives to hard chrome plating.

## EXOGARD™ Chrome-Free Solutions

Coatings made by the EXOGARD™ process are dense, thin, smooth, and designed to provide corrosion and wear protection in all industries. These coatings are also REACH-compliant, environmentally-friendly, and can be used to replace hard chrome plating.

The EXOGARD process generated four coating families: EXOGREEN™, EXOPRO™, EXOSHIELD™, and EXOFILM™. Details of these coating families and their messages are below:

### EXOGREEN™

EXOGREEN™ coatings are **thin, environmentally compliant** and provide an **economical solution** that performs equally to hard chrome plating.

### EXOPRO™

EXOPRO™ coatings are **cost-competitive** as compared to traditional HVOF and HVAF coatings, **environmentally compliant** as an **alternative to hard chrome**, perform better than hard chrome, and are **tougher** than standard HVOF/HVAF coatings.

### EXOSHIELD™

EXOSHIELD™ coatings are **fully dense, hard and tough**, providing best-in-class **corrosion and wear protection** with **exceptional finishability** to less than 0.025 µm/1.0 µin Ra values.

### EXOFILM™

EXOFILM™ coatings are an **ultra-thin** solution for **textured surfaces**. They are **environmentally compliant** and perform better than flash hard chrome plating.

### EXOGARD™ Coating Properties and Performance Data

Coating Porosity	< 0.5 %
Microhardness	HV 1100 minimum
Surface Finish	< 1 µ inch Ra, < 0,03 µ m Ra
Achievability	
Sand Abrasion Test - ASTM G65	1 mm <sup>3</sup> /rev
Salt Spray Test - ASTM B-117	Passed 1000 hrs @ 0.002"/0.05 mm thickness
